

Merlinus Anglicus Junior :

Or, An Ephemeris for the Year 1688.

According to the Method of Mr. W. Lilly. With many
useful Calculations, and variety of other Furniture
proper for such a Work. The like not Extant.

*Continued by (his Quondam Amanuensis) Henry Coley,
Student in the Mathematicks and Astrology.*

— *Agunt, non cogunt. Quæ supra nos nihil ad nos.*

London, Printed by J. Maceck for the Company of
STATIONERS. 1688.

TO his worthily Respected (and truly Ingenious) Friend Mr. *John Brown*, one of his Late Majesty's *Chirurgeons*, and Senior *Chirurgion* of *St. Thomas's Hospital, Southwarke*: The Author hereof *Hen. Coley* wishes him Felicity in both Worlds, and Dedicates to his *Patronage* these his *Astronomical* and *Astrological Essays* for the Year 1688.

To the Courteous Readers, and to the
Legitimate Sons of *Urania*, &c.

Gentlemen!

According to my usual Custom I appear again, and present you with an Ephemeris for the Year 1688. not doubting of your candid Acceptation. The chief design of this Continuation is to keep up the Name of the Famous Mr. Will. Lilly, and to accommodate those Students in this Nation (that cannot furnish themselves better) with a complete Ephemeris and Table of Houses in a Pocket-Companion for their daily use: 'Tis not the great intemperance I receive of my Masters that animates me, for that is considerable and scarce Porters Wages, but in reality to oblige the younger Sons of Art, and all those who are Lovers of such kind of Speculations; I heartily wish it were much better for their sakes: If you meet with any Errata's that have escaped either in the transcribing or printing (as I presume there are but few) my request is, that such as know how, will be pleas'd to amend them, and for others I conclude they will not be offended. As for the Astrological Predictions and Observations, I have written very sparingly, because I am unwilling to give offence, or disturb my self or others; But I have compos'd and collected such matter, as, I hope, may prove as pleasant as useful, and thereby gratifie the Humors of all or most sorts of People, which if I find it prove effectual, and be accepted kindly, I have my desire, and 'twill encourage me for the future to study to oblige them farther to the utmost of my mean ability. The Poetical strains in the Kalender-part are only some of the Remarks of an Ingenious Scholar and Mathematician of our Nation newly reviv'd, they are (in my opinion) so much to the purpose, that 'tis pity they should lie dormant, or be forgotten, and therefore I have (I hope without offence) presented them once more to publick view; and this I thought convenient to signify concerning the Book it self. Now for the Art of Astrology, which many (that are wholly ignorant thereof) do vilifie and despise as ridiculous Foppery, I say it has been

To the Readers, &c.

sufficiently vindicated and clear'd from all aspersions by divers Learned men in all Ages, and remains still in its purity in spite of all opposition: For it mingles not with Divine matters, or the Secrets of God Almighty, but 'tis Scientia Media, a Science between the Mathematicks and Natural Philosophy, as Aristotle testifies, lib. 2. cap. 2. Phys. Nor do the Professors thereof maintain a Fatal Necessity; The Stars have an Influence and power only upon natural things, and who denies, but freely acknowledges the Providence of God over-rules all things, *Stellæ inclinant, non necessitant*, and 'tis better to be doubtful in occult things, than show our selves contentious in such matters as are uncertain: It is the insulicity of men to sally into the greatest passion upon the least occasion. The World is a Shop of Tools, of which the wise-man only is the Master, and many speak ill, because they never learned to speak well. Certainly Astrology is of great Antiquity, and were there not something of verity in it, 'twould never have been even to this time promoted and propagated. Aristotle derives it from the Egyptians, Tully from the Assyrians, others from the Sidonians, Chaldeans, Persians, Indians, Arabians, Greeks, &c. Sir Christopher Heyden has long since made an unanswerable defence of Astrology, and has shewed the Usefulness and Legality thereof at large, to whose Book I refer the greatest Antagonist—— I for my part in my thirty years study of that, and the Mathematicks, have by experience found much truth therein, but 'tis not infallible—— All I shall say farther in this matter, shall be in the words of the Poet.

If any have imbosom'd error so
To hatch it still, though they the danger know;
At their own peril be't, they pity find
Who lose their eyes, but not who will be blind.

From my House in
Baldwins Court in
Baldwins Gardens,
Sept. 6. 1687.

Gentlemen!

I remain still your
humble Servant,
HENRY COLEY.

Merlinus Junior, 1688.

(.) Of the Utility and Excellency of *Astronomy*, upon which is grounded the *Art of Astrology*.

TH E Science of *Astronomy*, altho' beyond my ability, and above my knowledge fully to explicate and illustrate according to its real worth, yet I think it necessary to give some short hints of its admir'd Excellency; great things being judged by their parts. Divine *Plato* did say, that for the knowledge of *Astronomy* men had eyes given them, that they might the better observe the motions of the Heavens and Heavenly Bodies: *Ptolemaeus* in *primo Libro Almag.* hath these words, *Dicit, hanc unam scientiam esse viam ac semitam ad sciendum Deum Altissimum*; and besides the Opinions of men only enlightened with humane knowledge, the Sacred *Scriptures* confirm the same in many places thereof, and in particular in the *Psalms* of *David*, viz. *Celi enarrant gloriam Dei, &c. opera manuum ejus, &c.* *Psal.* 18. ver. 1. See also *Psal.* 8. ver. 4, & 5. and *Rom.* 1. ver. 8. Tho' all things created do demonstrate unto us the greatness of the Creator, yet chiefly the Celestial Bodies in regard of their multitude, magnitude, and splendor; also in their variety and perpetual stability of their Courses, they do evidently declare the Goodness, Wisdom, Power and Providence of the Almighty, inducing us thereby to the knowledge, love, and admiration of him.

This Science doth demonstrate unto us the Order of the Stars, with their *Situations*, *Positions*, *Risings*, *Settings*, their *Multitude*, *Magnitudes*, their *Distances* from the Earth, their *Distances* amongst themselves, the places of the *fixed Stars*, the *Apsells* of the seven Planets, with their *Conjunctions*, and *Oppositions*, the *Eclipses* of the *Luminaries*, &c. *cum multis aliis.*

Astrology is sometimes taken for *Astronomy*, but most

commonly distinguished by an Addition, as *Prognostica*, or *Judicial*, she is indeed the Daughter, brought forth by *Astronomy* the Mother, and by some Pretenders now a-days too much abus'd, tho' it be granted by the most *Critical* sort of people, that the *Affects* of the *Planets* amongst themselves with their Influences and those of the *fixed Stars*, often produce remarkable Effects upon sublunary Bodies, being often causes of too much heat, or cold, at other times occasioning violent Tempests and Storms (according to the season of the year and situation of the place) as *Thunder*, *Lightning*, *Rain*, *Hail*, *Snow*, *Winds*, producing many distempers, as if the *Elements* did mutiny against order, and so fall at discord amongst themselves, and these distempers begetting Barrenness, forcing the willing *Earth* to deny her wonted and wholesom fruits, by which means *contagious* and *pestilential Diseases* do invade the *Earth*. But *Signs* in the *Heavens*, by which God doth commonly forewarn us, are by things *supernatural*, or exceeding their common Course, as by strange *Apparitions* and *prodigious Eclipses*, to the astonishment of Nature, as we may read in Scripture, *Exod.* 10. *ver.* 21, 22. *Jos.* 2. 10. & 31. *Ezek.* 32. v. 7, 8. *Isa.* 13. 10. So at the time of our Saviour's Passion, when the whole World was redeemed, the *Sun* was *Eclipsed*, and the *Moon* at *Full*, and continuing the space of three hours, *Mat.* 27. v. 45. *Mark* 15. v. 33. And *Sleidanus*, *lib.* 19. writeth that in *April*, in the Year 1547. the *Sun* was for four days totally obscured to all *Germany*, as if the *Heavens* had put on a veil of mourning; *Egyptian darkness* beginning there to oppose the day: and in some part of the *Low-Countries*, viz. *Holland*, the *Sun* was so obscured, denying them his light, that many Travellers, in the time of the *Artificial days*, did lose their ways, some fell into *Pits*, others drowned in *Ditches*, and thereby many lost their lives, as you may read more at large in *Stow's Chronicle*: So about the time of *Caesar's* death, as 'tis recorded by *Plutarch* in *Vita Julii Caesaris*, we read of an *Eclipse* that continued almost a year. But to return to my first subject: The Science of
Astrono-

Astronomy is descended from the Infancy of the World, as derived from the Inventors, who were the first Propagators of *Human Kind*, as *Adam*, *Noah*, *Abraham*, *Moses*, *Jesus* &c. with divers others of those times, as *Josephus* relates, *Antiq. Judaic. lib. 1. cap. 4.* *Adam* having foretold his Children that the World should be twice destroy'd as by the violence of Waters and the unextinguishable force of *Fire*, and they thinking to prevent the loss of their new learned Knowledge, viz. *Astronomy*, and lest it should be buried in oblivion from succeeding Ages, did *institute* the Science of the *Stars* in two *Pillars*, the one of *Sinai* preserv'd in *Syria*. And in the same Book, *Chap. 15.* he writeth thus, *Abrahamus erat vir iustus & magnus, & in calissimis rebus valde expertus.* But by whom this Science was first put into order and method, it remains very uncertain; some attribute it to *Atlas*, Brother to *Prometheus* King of *Mauritania*: *S. Augustine, Lib. 18. de Civitate Dei*, ubi ait: *Atlas magnus fuisse Astrologus dicitur, unde occasionem Fabula invenit, ut cum Caelum portare confingeretur. Thales Milesius* is said to be the first that found out the Reason of *Eclipses*, and the Calculation of them, which he foretold to *Jovianus* in the third year of the *Olympiades*. Since which time it hath been very much perfected and brought to great perfection by several Nations, either moved thereunto by the nobleness of the study of the *Celestial* and *splendorous Orbs*, or urged by necessity (which has no Law) and this is the most common Opinion of most Philosophers of old: *Scintias peperit admiratio, Artes indigentia seu paupertas. Caelius Rhodiginus, lib. 18. Lestionum Antiquarum*, suppoeth that the *Sidonians* did lay the first grounds of *Astronomy* by reason of their many Voyages to Sea; for without *Astronomy Navigation* is almost void and useless: But after these the succeeding Ages did make these *Sciences* more useful, as by the labour and industry of the *Chaldeans*, *Aethiopians*, *Grecians*, *Arabians*, *Italians*, with multitudes of others in several Countries down unto our times, the chief of them would make a Volume (being recorded as particular men) but my limits are here

too narrow to be ample on this subject, I shall only give the Reader one remark worth his notice, and so proceed to consider the state of the Year, as is usual, viz. *Columbus* (in the time of *Ferdinand King of Spain*) being with some *Spaniards* landed in *Jamaica* (a well known Island in the *West-Indies*) where being in eminent danger, and almost ready to perish for want of sustenance, and being denied all Relief by the Natives, their *Captain* being neither able to perswade them, nor of strength to force them, did speak confidently unto these *savage Indians* thus: That if he had not Provision for his men, the *Moon* should be *Eclipsed* the night following; but they slighting both his prayers and his threats, retreated into the Country, leaving him comfortless upon a wild, barren, unhabitable Coast: But few hours after they perceiving the *Moon* to be obscur'd, not knowing the cause of it, and fearing a *Divine Revenge*, did come and prostrate themselves at his feet, desiring to be excused, and neither he nor his company should want any thing that the Country could afford, which presently was performed, and thus under God they were preserv'd by their knowledge in *Astronomy*. Thus *Ovid*, lib. 1. *Fast.* *Falices anima, quibus hæc cognoscere primum, &c.*

(II.) *Of the four Quarters of the Year, and first of the Winter-Quarter.*

WHich this Year commences, December 11th 2^d 22^d PM. 1687. at which time you may find three degrees of the fixed Sign *Leo* upon the *Mid-heaven* (or tenth House) and 25 degrees of the *Celestial Balance* arises; the *Moon* separates and applies very favourably, and the Position in general appears as promising and hopeful, whence we may expect answerable effects. The *Almighty* useth in all sublunary affairs fit means and proper instruments to perform what he intends. By *Astrology* we have certain Rules to judge by, composed to judge of or concerning
natural

natural contingencies, but not miraculous, &c. and is ever supposed a known Basis, not a *felicitas* one. The most considerable *Aspects* or *Configurations* of this Quarter are mostly benevolent and no less significant in *mundane affairs*, amongst the rest that hateful Opposition of *Saturn* and *Mars*, which commences the first day of *Hilary Term* this Year, is most to be regarded, because such *Aspects* usually produce dangerous Effects as to Diseases and other cross Occurrences amongst Mankind in the World; however, this *Opposition* being seconded with very powerful Influences of the *Planets* of benevolent Nature, we hope may abundantly mitigate the evil portended, which I most heartily desire.

This hateful *Opposition* happens in *Aquinal* and *Cardinal* Signs, and therefore accounted by *Astrologers* the more significant, and not only so, but these Planets are both very powerful, as being in their own Essential Dignities: Also *Mars* is in *Aries*, his own Mansion-house, wherein he delights, and is very potent, *Saturn* is in *Libra* his *Exaltation* no less potent than *Mars*, and therefore we may justly expect to hear of some notable Effects from remote parts of the World, where there is and has been much Action of late years. *Mars* is in a fiery violent Sign, and some of the Ancients say, *Mars constituit significare Tartarus, Tartarus, similisque Genis Tyranicus, viz.* It is held generally that *Mars* doth signify the Turks, Tartars, and such kind of Tyranical people; if so, then will there be not only great Commotions, Wars, Bloodshed, amongst those Barbarous people, but also great numbers of them are like to fall by the Sword of the Christians, perhaps to their total ruine— However the Ancients have attributed the *Tartars* to *Mars*, yet 'tis thought much more rational, that *Saturn* doth more naturally represent them, because of their bestial life, poverty, laboriousness, &c. not well settled in any Religion. In short, let them be represented by either of these Planets, very great disasters are like to befall them, if not total ruine nearer approaching, than they are aware of. As to the weather, consult my

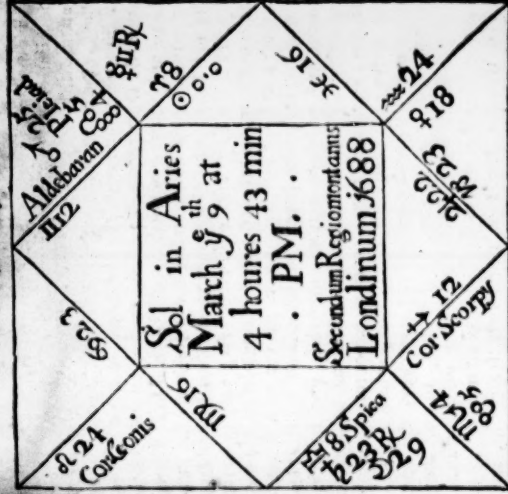

Conje-

Conjectures thereof in the Calendar part, and for diseases of this Quarter, they should be Gripings of the Guts, Convulsions in Children, Dropries, sore Throats, Cramps, dry Coughs and Phtisick, the Gout, and other diseases arising from purrified Blood and Cholera, not much different from other Winters. And to conclude, many debates and strugglings one Party against another may be expected, perhaps more than ordinary, yet nothing as to us of any dangerous consequence I presume, if I may be so bold as to make my innocent and harmless Conjecture. Thus we may daily see that such are the mutations and vicissitudes of all sublunary things, that he that attempts to erect any durable satisfaction on them, out-does the folly of that absurd Builder that built his house, not upon a sandy foundation, but upon the water. To conclude, take amongst the rest, as pertinent to my purpose, this piece of Poetry of a Friend.

*We see how the Springs fresh Beauties do decay,
Sun-burnt by Summer's more robustious ray;
Declining Autumn next succeeds, and then
We're rapt in hoary Winter's arms agen;
So blooming Youth by manhood is o'ertan't,
And Mithood struggles with old Age in vain;
There's nothing stable, various Scenes obtrude,
And all the World's but a Vicissitude.*

(III.) Of the Spring-Quarter.

THE Spring-Quarter this Year takes beginning, according to the Tables reported most correct, March the 9th 4^h 43' PM. and the Position of the Heavens in the Latitude of London will appear as in the following Scheme. And thus appears the Face of the Heavens at the Sun's Ingress into Aries, immediately after the Opposition of the Luminaries or preventional Fall Moon. Here the Moon is separating from the Conjunction of Saturn, and meets with no other Aspect before the Opposition of Mars, an angry Planet, and he amongst a Constellation of as angry Stars,

vis. the *Pluads*, which I conclude may have as rash Effects amongst a sort of hot-headed persons, that never will think themselves safe till death secures them, and pursues a period to all their discontents, of what nature or kind soever. The two Superiours behold each other by a Quadrave Aspect, and are distant a fourth part of the *Zodiac* in *Cardinal Signs*, which in *Starry Diastels* portends something worth observation, in regard such an *Aspect* falls but seldom, and therefore is the *Prodromus* of some remarkable *Transgression* in *mundane Affairs*; at the same time *Mars* darts his friendly ray to *Jove*, and therefore adds more matter worthy the consideration of the most expert sort of *Astrologers*. Hence in general terms we may expect the *Augurs* of this *Spring-Quarter* to be very material in most parts of *Europe*, and probably the rest of the year may produce matters very remarkable—*Nemo particularia praeclucit, &c.* Now

Now this *Quarter* produces much variety in the *Aspects* of the *Planets*, as may be seen by the *Ephemeris* it self, amongst the rest two *Eclipses* of the *Luminaries*, viz. one of the *Sun*, and the other of the *Moon* (tho' neither scarce visible to us,) and upon this consideration some very remarkable Occurrences should be carried on throughout *Egypt* at least, and of notable remark — and from whence we may observe, how whirling and unstable are the *Pinnacles* and *Battlements* of the most potent *Empires*, and how slippery is the *Top* of *fickle Fortune*. 'Tis great pity to see the *Curtain* drawn between just deserving persons and preferment; and we may daily verifie by our own Experience, that those who have been bad enough by their unworthy and dishonest Actions, even their own infelicity has precipitated their Fates, and sometimes again those that have acted their parts with much integrity, even their own merits have been their ruine, every man is industrious to promote his own interest and advantage, and some use their wealth as Anglers do their fish, to bait their Hooks to catch more, 'tis God Almighty only that is the common Friend as well as the Father of all men.

The Weather should be moderately seasonable, and those that would be curious in the Speculation thereof, let them consult the Learned Dr. Goad's Book, lately published and sold by Mr. Obadiah Bagnave at the Black Bear at the West-end of St. Paul's Church yard, and such Gentlemen that delight in Curiosities relating to the Weather, may be furnished with all sorts of weather-glasses, most accurately made with many varieties therein, not commonly known, as also all manner of Mathematical Instruments either in Silver, Brass, or Wood, &c. by Mr. Warner at the Sign of the Globe and the Kings Arms in lower Lincoln-Inn-fields near the new Buildings —

The Diseases of this *Quarter* should be many, and those dangerous, chiefly such which arise from *Sorfeits* and *Debauchery*, thereby contaminating or putrifying the whole mass of Blood, whence sickness of divers kinds follow, and oftentimes untimely and sudden death. To conclude the Judgment of this *Quarter* :

How

Martius Junior, 1688.

How fast and brisk, how glorious and gay
Does Nature's face look in a springing May?
Thou in new Lavenders and blooming Fruits,
And budding Flowers open'd this fragrant roset,
Thou pretty Birds strain in their harmonious throats
To make Woods echo with a thousand notes.

(IV.) Of the Summer-Quarter.

THIS Quarter commeth, according to *Astronomical* Computation, *Just* the 10th, 11th 20th may, at which time the *Planet Jupiter* opposes *Mars* from *Tropical Signs*, and during the whole *Quarter* we may observe the *Influence* of many remarkable Configurations, as they are set down in the following *Epitomis*, and therefore needs to enumerate them here. Now this *Quarter* (being the most active season in the whole Year) let us expect suddenly some very considerable matters to break out beyond Sea. I shall not presume to launch out too far, or boldly touch at particulars, for none but those inspired with a Divine Oracle predict particular persons or things, says the Learned *Ptolomy*. There seems some hot dispute between those of a *Martial*, and others of a *Social* nature and inclination, which in regard the *Opposition* is from moveable Signs, and both *Planets* dejected therein, shews the combate or contest will soon determine, and so great matter of Conquest may be expected of either side. Clear and round dealing is the honour of mans nature, secrecy and celerity are the two great wheels upon which all great Actions move. Certainly now, if ever we shall hear of matters very famous in many places abroad, and who knows not that Opportunity admits of no after-game? To be humble to our Superiours is our duty, to Equals courteous, to our Inferiours nobleness, and to all safety. Let men forbear to be troublesome, lest they be thrown into an amused *Infirmum*. Let us study Peace and Loyalty, and learn to be content in all conditions; for if we fear all things that are possible, we live without any bounds to our mis-

miseries— Tho' Experience testifies that contentment is oftentimes as great a stranger in the Palace as the poor Cottage; and such persons amongst us that suffer their wills to run opposite to their Reason, any man is *Astrologer* good enough to read their destiny, and preserve their destruction. As to the Weather, consult the *Kalendar*; and for the Diseases of this Quarter, expect none new or strange. Lastly, I conclude with the Poet:

*Nature in youthful innocence dress'd,
And blooming joys are every where express'd.
But still to make the plentiful Crop compleat,
There is requir'd a more substantial heat,
Which Summer brings to ripen Corn and Fruit,
That they may better with our Nature suit,
Then does the long-expect'd Harvest come,
And merrily the Sheaves are carted home.*

(V.) Of the Autumnal Quarter,

Which this Year commences September the 12th, 36th past 7 mane, the Moon defluxes from a *Sextile* of *Saturn*, and happily applies to a *Trine* of *Jupiter*, and *Conjunctiō* of *Mercury*, to which I may add the benevolent *Trine* of *Jove* and *Mercury*: So that it may be reasonably hoped this Quarter may prove (I mean in the general actions of men) no less healing than hopeful, consideration being had to all the mutual Aspects therein, which the Reader may inspect at his pleasure, no Art pretends to absolute certainty or infallibility concerning future Events, or matters to come, the *Astrologer* ought therefore (saith *Cardan*) never to pronounce any thing absolutely or peremptorily concerning future Contingencies, the reason is, lest he bring himself and the Art under censure and condemnation, in case it happen he take not his measures truly, and the Event contradict or answer not his Prediction or *Prognostication*; on the other side let it be considered, (as has been formerly intimated) Is not an Error in the

Abinger as tolerable as in the *Divine*, *Physician*, or *Lawyer*, or in men of other Professions? Is the Divine's Judgment always *Grasp*? Does the *Physician* always cure? Is the *Lawyer's* Opinion ever infallible? Does the *Lagician* still prove, or the *Rhetorician* always persuade? So long as we are men we must be subject to infirmities, oversights, and errors, *Humana est error*; and farther, 'tis the pleasure of God sometimes to frustrate the Portents of Heaven for the sins of the people, who otherwise might partake of their natural sweetness and benignity, yet it cannot well be denied but that *Mundus superior animas illas insinuat*, and that the *Celestial* Constellations do pour forth their *Insinuations*, and operate upon these inferior Bodies: The *Almighty* doth not always speak or forewarn the wicked World by express words, but many times in an extraordinary manner, admonishing us by the Motions and Apparitions of the Heavenly Bodies (which are the works of his own hands) as is sufficiently testified both by that Star that led the *Magi* or *Wise-men* we read of in the *Gospel*, to the knowledge of our *Saviour's* Nativity, and by the words of *Christ* himself, predicting the destruction of *Jerusalem*, he forewarn'd the *Jews* to lift up their eyes to Heaven to behold the Signs that should be in the *Sun* and in the *Moon* and in the *Stars* before that day, nor did the Events fail his *Prediction*; for (as *Josiphus* reports) besides that great and terrible *Eclipse* preceding, there appeared also a prodigious *Comet* in form of a *flaming Sword* over that City for the space of a whole year, as you may read *lib. 7. cap. 12. De Bello Judaico*; and certainly it may not be doubted, but it pleaseth God by these *Celestial* *Prodigies* no less to communicate and confer with men about his secret Determinations, than he was wont of old by *Visions* and *Dreams*. But I confess 'tis beyond the reach of any man's wisdom to discover in the least the abstruse steps of a Deity—yet man covers nothing more than to pry into Nature's Closet, tho' he know not absolutely thereby what is to come. The *Disasters* of this *Quarter* will not be dangerous nor much different from some former Years' *stempers*,

Merlinus Junior, 1688.

Stempers, we see all men are willing to extend the thread of life as far as 'tis possible, and yet why should we dread our end, when we all know there is nothing more certain, and that all created things are limited, and in the place where we are all of us to go, there are no *Earthquakes* nor *Thunder-claps*, no *tempestuous Seas*, neither *Wars* nor *Pestilence*; we ought to prepare our selves since no man knows exactly the year, month, week, day, or hour — Nor is it ever too late to learn what 'tis always necessary to know, or shame to learn so long as we are *ignorant*, that is to say, as long as we live. And thus I conclude this *Section* and the Judgment of the whole Year, which I could have put into another dress; but *Cynthia* or the *Moon* has got the wind of me. God preserve his Sacred Majesty *James II.* His Royal Consort, and all the Royal Family. *Amen.*

(VI.) *Of the Eclipses of this present Year.*

THIS Year there will be four *Eclipses*, two of the *Sun*, and no less of the *Moon*. The first of the *Moon* falls *April* the 5th, the beginning will be at 4 hours 47 minutes, the middle or greatest darkness at 6^h 22^m, the end near upon 8. PM the *Digits eclipsed* 8. 6. 12, the *Duration* 3 hours 12 minutes. Some part of this *Eclipse* may be seen, if the Air be clear, for the *Moon* will rise near 7 at night, some *Digits eclipsed* in about 26 degr. of *Libra*.

The second in order will be an *Eclipse* of the *Sun*, *April* the 20th about one in the morning in about 11 or 12 degrees of *Taurus*, but invisible to us, yet may be seen to our *Antipodes* even in their very *Meridian*.

The third *Eclipse* will be of the *Moon*, *Septemb.* 29. near 10 in the morning in the 17 degr. of *Aries*, but not to be seen with us.

The fourth and last should be an *Eclipse* of the *Sun*, *October* 14. about 7 in the morning in near 2 degrees of *Scorpio*. Some part of this *Eclipse* may be seen in *England*, if the Air be clear, but nothing considerable, I presume, either in this or any other *Eclipse*.

Could we, like *Janus*, but reflect and see,
How New Years by the Old ones us'd be;
Our Forefight (though but little) would conclude
VVe may by dreadful Vengeance be pursu'd.

January hath xxxi days.

Want ye a Servant, Sirs? Behold me here
 Proff at your beck to serve you all the year.
 No wages will I ask, Earnest will do,
 When others will have that and wages too.

 after noon.

Last Quarter
 the 15 day, five
 after noon.

New Moon the
 22. 10. at night

First Quarter
 the 29. day,
 1. after noon.

THis Month appears to be chequered (as it were) with both good and bad *Aspects*, or *Configurations* of the *Celestial Bodies*, and if it be granted they have any Influence upon humane Bodies, something of good, or ill, or both, may be observ'd from thence very significant, both in the *Macrocosm*, as well as in the *Microcosm*: what those *Aspects* are I need not repeat, since throughout the whole year they are here presented in their proper places, in this *Ephemeris*. viz, the *Longitude*, *Latitude* and *Aspects* of the *Planets*. Some notable Occurrences, especially towards the end of this Month, and the beginning of the next, (if I may presume to conjecture) will be transacted in some distant parts of *Europe*, well worth our notice and observations—

The inquisitive Soul may go far and find out much, but still he shall see more *Ground* before him than he left behind. We may sometimes observe, more changes in a few years, than in all probability of expectation many Ages could produce.

The world is like a *Lottery* where a man may be made or undone in a Moment, before Possession we think our Selves *Miserable*; and when our desires are satisfied we grow weary of our happiness.

Optima corrumpit pessima.

February hath xxix days

February 1688.

The Lunar Aspects.

The Planets Mutual A- pects.

[illegible]

Foul weather is no news; Hail, Rain, and Snow
Are now expected, and esteem'd no woe:
Nay 'tis an *Omin* bad, the Yeomen say,
If *Phœbus* shews his Face the second Day.

February hath xix days.

The Coat wherewith you will me to be clad,
Shall not offend me, be it good or bad.
Outlandish Silks, or English Tanned Leather,
Come all to one, I do not value whereby.

Note that if you subtract the Hours and Minutes of Sun rising out of 12. Hours, the remainer is the time of Sun setting: or so many Hours and minutes that the Sun rises before and after six, so many hours and minutes, he sets before or after six.

OUR own thoughts are the *Mould* in which we cast the *Model* of our happiness. This Month is adorned with many Benevolent and promising *Aspects*; and if so, we may reasonably hope for a *Pleasant Season*, and that all things will contribute to the general content of the whole *Nation*; Here is indeed much more *Harmony* and *Gall*, and many persons expectations are now answered, their hearts grow light, and they are as it were Transported beyond themselves, yet some there are that will always repine and be uneasy.—'Tis an ill wind blows no body good, we are every day hearkening and inquisitive after new things, and we are as doubtful what may occur either for, or against our interest and advantage, and thus our passions turn us round in a perpetual Circle of *Vicissitude*. The *Astrologer* considers future effects (or events) as they are foresignified in their *known causes*. But knowledge of *future things* without their *causes* absolutely belongeth to God only, and to whom he is pleased to reveal them as to his Prophets, &c. saith the Learned Sir *Christopher Haydon*: and therefore *Astrologers* in their *Predictions*, intrude not into the secret judgments which God Almighty hath reserved to himself; with him there is nothing past, or to come, but all things are present unto him, as they depend upon his *Divine* fore-ordinance, and *Providence* of things that happen in the world out of their causes.—Hence he is pleased to govern the ordinary course of Nature by his *second cause*, and in them to reveal what he hath from eternity.

morning.

New Moon the
21 day, at 6 a
night.

First Quarter
the 28. day, at
3. after noon.

S*Eneca*, tells us that the motion of the *Stars*, and their Influences are acted by the command of an Eternal Decree. It is by the Dictates of an *Almighty* power, that the heavy body of the *Earth*, hangs in the *Balance*. This Month is attended with various Configurations, and most of them, of *Malevolent* tendency, whence we may expect very active effects both in the *Air* as to the weather, as well as in the inclinations, and actions of *Mankind*; some persons run themselves into mischief head-long, others are afflicted with sickness and other accidental crosses and vexations, whence arise many complaints; some people scorn to be taught, others are ashamed of it, though 'tis no shame to learn. The exact truth of things is only known to God, but it is yet lawful for us to enquire, and to conjecture, though not with too much confidence. To suffer shipwreck, or to be crushed with the ruins of a House, these are great misfortunes, but they seldom happen; the smoke gives us notice of a fire, the Clouds bid us provide for a Storm; but humane malice has no prognostick, there is no trust to countenancers, for some men carry the shapes of men and the Hearts of Beasts, *Est durum clare contra flumen natare*. We are built much upon opinion, which yet is but a sandy Foundation——It is the best way sometimes to expel Poyson by a contrary Poyson, and thus War may be said in some cases to be a Remedy as well as a Disease.

April hath xxx days.

The Cuckow, though her Notes are old and plain,
Is with much pleasure heard to sing again.
For Country people constantly do prize,
Not what she saith, but what she signifies.

Useful Observations and Speculations, &c.

Good men from Vice, for love of Vertue run;
But Fear alone makes bad men Vice to shun.

This Month affords us an *Eclipse* of each *Lunary* though neither of them scarce visible with us — But it has been observ'd that such Months have produced some notable matters, especially in those places where they have been seen, together with the concurrence of other effects proceeding from different causes; yet now no great matters may be expected, or nothing but what we have already often experimented. The course of this world is full of change; and let our course of life, be what it will, many of us may expect misery enough. I advise all people to forbear expressing their dissatisfaction in any point, or meddling with matters out of their Sphere; thereby endangering their Persons, Families, and Estates. A wise man is always more ready to hear than to *speak*; we read of none that ever were undone by *hearing*, but Thousands by *speaking*. It is the sweetest revenge to forget an *injury*. whoever observes the *World*, and the order of it, will find all the motions in it to be only a *Succession* of falling and rising; nothing extinguish'd, and even those things which seem to us to perish, are in truth but changed. The seasons go, and return, day and night follow in their courses, &c.

Si Deus nobiscum, quis contra nos?

IF men could entail their *Virtues* with their *Estates*, what a world of glorious *Saints* would this World afford? on the other side, if *Vice* were *Hereditary* what Swarms of wickedness would fill increase? This is the pleasant merry *Moments* of *May*, attended with many favourable *Aspects*, which in all probability may have answerable effects, in the general: 'tis true *June*, all this year is in his *fall*, and therefore dejected: he now, to us, appears *Retracted*; and at the very close of the *Moments* the two *infortunes* square each other, whose effects may be expected in some succeeding *Moments*, let such parts of the World as are concern'd look to it; for certainly there is a *Fate* that hurries man to his end beyond his own intention: If the *Christian* make the *Turk* to tremble, it is not without reason —

Men, Nations, and Cities, have all their *Fates*, and Periods: Those *Kingdoms* that stood the shock both of *Foreign Wars*, and *Civil*, come to destruction when the Almighty pleases. To conclude, let your censures (of others) be modest, for no man can express himself so *exactly*, but a censorious *Critick* will find matter enough to work upon; but it is not always a part of wisdom to discover a folly in any person. —

Arbor ex fructibus cognoscitur.

June bath xxx days.

Certainly God hath made Man to live in doubt that he might thereby be kept in awe to Good by fear, and expectation, notwithstanding we are generally covetous to be prying into Natures *Closet*, and thereby would know what is to come. This Month has its share of gross *Aspects* of the *Planets* amongst themselves, (as those that understand, may plainly see) but what their Portents or real signification may be as to mortals, none can attempt to declare particularly, only thus we may say, That if they emit their *Rays* to each other friendly and favourably, as we behold them from the Earth, we may expect their effects the same; or the contrary, &c. and if Fate be certain, 'tis better to conceal it, if by no means it may be prevented — the effects or Influences of the *Stars* are not presently perceived, though their motions and Influences cease not, but operate insensibly and constantly, and what time seems to us to bring forth is caused by, and must be ascribed to their motions and *Conjunctions*.

Let us not forget the happy *Translations* of the last year, for they are worthy to be *Recorded* — and we may still justly hope I presume for a continuance of peace and Tranquillity amongst us; than which there can be no greater felicity in this World.

HOW is humane understanding inwrept in darkness? How is that Diviner fragment of a rational Soul benighted as it were in the mists of Error? So purblind are the minds and understandings of some men that they too often embrace errors for truths— one man excels another in the acuteness of his Faculties, yet our common parent (the Earth) hath not so disinherited any man of Ingenuity, as to leave him destitute of all inward Accomplishments. This *Momb* produces but few configurations of the Planets, and therefore we may now expect the effects of some of the former, let our own experience inform us. There is no greater happiness attends a people than that which depends upon the Counsel and Valour of a *Prudent Prince*. The beat and light of the Sun which redeems us from so much darkness is generally acknowledg'd, but (as I said before) the operations of the rest of the *Planets* are not perceiv'd, because they are not all equally hot, nor have that *Majesty* of light; and their qualities differ, but are like *Lamps* which can neither cast forth any sensible heat, nor shed such a light as can enlighten fully those places they are set in. The *Summer* in all probability should prove healthful in the general— And who knows not but health of Body and Tranquillity of mind are the two great Hinges on which all humane content is turned, 'tis the true Honey-comb that sweetens all our worldly comforts.

WE often see the Crystall Serenity of the Smiling Heavens, darkned with the Tears of a Frowning Skie, and the Brightness of the Sun benighted with the Horrour of obscuring Clouds: But we may expect very little of this, during this Month, for the Aspects of the Planets are very calm, and promise nothing but Serenity both in the Heavens and upon the Earth also; certainly the generality of mankind cannot but be well pleased, and enjoy themselves in much happiness and tranquillity of Spirit one with another: may it long continue so. However it may be very convenient in the midst of a calm, to think of a Storm; and they are the worst kind of enemies for whom we cannot be prepar'd in War, and against whom we cannot be secure in Peace. Men can never be cautious enough at all times. — But where a general voice warrants an approbation, there every service is a duty. —

What more violent than the Winds? what more sudden than those Aereal Blasts? yet the Aspiration whence those Winds and Aereal Blasts proceed, can neither be seen in darkness, nor in the light: But the vehemency and violence of those Tempests is sufficiently demonstrated by the effect.

*Experientia ad Scientiam acquirendum,
maxime confert.*

THIS *Money* produces no great matter of variety of *Aspirations*, those that ate, we may account mostly *Benevolent*, and from such *Expectations* we may very well expect as healing *Insurances*, which produce unity, agreement, and love one amongst another, and what can be more desired? In the midst of all, some persons will be active enough to promote their own-interest, and if it be honestly, who can blame them? *Money* is the Bait that most catch after, whether *Rich* or *Poor*, yet no man can be *Poor* that has enough, nor *Rich* that covets more than he has; *Money* never made any man *Rich*, for the more he had, the more he still coveted. 'Tis said that the great subject of humane calamities, is *Money*. Take all the rest together, as Death, Sickness, Fear, Desire, Pain, Labour, yet those which proceed from *Money* exceed them all. And in this World I say *Plenty* doth but cross Content: for he that hath all things to his mind; yet too often we see wants a mind to enjoy all he hath.

—But he that hath enough, and thinks it so,
Tis not for more, nor pines to see that go;
That doth no wrong, and is discreetly free,
That man's end'd with Liberty.

Pecunia obediunt Omnia.

...

tourists by a long Vacation pin, find,

those that might meet with Beggary at home,
safe Terms for it, to London come.

and called it crime, not my crime.

*Alumnies by a long Vacation find,
New Fools to fill their Pockets daily find,
Those that might meet with Beggary at home,
On easy Terms, for it, to London come.*

October hath xxxi days.

Our Country Dolt, who hath his fests depending,
Impatient till the long vacation's ending,
Craves all into a Purse, and up he hies,
where he is welcom'd in this cunning wife.

Some men outlive their miseries, others had rather be undone than govern'd: yet in our Kingdom of *England*, a man may be as good as his will, and as great as he deserveth; here a terror hangs over the Heads of evil doers, and a scourge awaits at set — those that do ill. This Month among the *Aspetti* (which indeed are, but few) affords us an *Eclipse of the Sun*, and some part thereof visible to us, if the Air be clear; the effects whereof concern a very little; but here are Arguments of a quiet peaceable Empire, and good Agreements together: May it long continue so, is my hearty desire. And since there seems no danger to the contrary, no more need be said on that Subject.

Let none endeavour to advance themselves, by any indirect means; or be so ambitious as to present themselves upon the Publick Theatre, and thereby rush into the Eye and croud of the World to Act their Parts; meeterly for applause: for may we see after the most Pawning Circle they can make, at last fall back with Ignominy to their first point. Every Age produces men of as unbanded desires as *Alexander*, or *Cesar*, but God gives them not the same opportunity to trouble the World.

November hath xxx days.

November 1688.

The Lunar Aspects.

**The Planets
Mutual A-
ffects.**

The chart is a complex astronomical diagram, likely a star map or a chart of celestial objects. It is oriented with 'Orient' (East) on the left and 'Occid.' (West) on the right. The chart is divided into several sections, each labeled with 'Orient' and 'Occid.' at the top. The main title 'Spectra' is written vertically on the right side. The chart contains a grid of lines, with various symbols (circles, squares, triangles, stars) and numbers (1-16) indicating specific celestial objects or measurements. The symbols are arranged in a way that suggests a mapping of the sky, with numbers likely representing magnitudes or specific identifiers. The chart is a detailed representation of celestial data, possibly from a historical astronomical work.

William Herr-Hall, farewel, and welfare he

That told us for this year, Dismiss'd we be.
Hard must I work and fare, go bare and thin,
To get some Coin before next Term comes in.

November hath xxx days.

—Your Servant, Sir, I'm glad to see you here,
 That Honest Business runs on calm and clear.
 The Ablest Counsel May can procure,
 Give us in Black and White, all's safe and sure.

When the Almighty drew the World out of the first Chaos, he form'd it from returning thither again, by establishing a due Symmetry of parts; so also a regular order of *Months*; and hence it is that the *Heavens* have their constant *Revolutions*, the *Earth* its succession of determinate Seasons, *Animals* their alternate course of Generation and Corruption, and by this wise Government of Divine Providence, the World after so many Thousand years seems still in its *Spring*, and first *beauty*. Than which there cannot be greater truth, and 'tis worth our serious contemplation ——— This Month is ushered in with a Malevolent *Conjunction* of *Saturn* and *Mars* in the very beginning of the sign *Scorpio*, and it affords us the fewest *mutual Aspects* of the *Planets* of any Month in the year; thence we may expect little or nothing of Action of any kind, but rather a time of serious consideration: yet now the foundation of such matters may be laid that will not break out in several Months after; the aforesaid *Conjunction* seldom passes off without leaving some considerable impression upon *Morals*, let time unfold the Mystery. ——— 'Tis said we ought to retain any thing of *Truth*, and all advantages thereof, either in *Platonical Speculations*, *Peripatetical Ratiocinations*, or *Epicurean Sensations*, nay even *Sceptical Caution* it self: but 'tis not safe to be *Dogmatical* in any Subject, &c.

Useful Observations and Speculations, &c.

IT is well known that *Creation* and *Being* is the Power of a *Deity* only, but the *Quality* of this *Being*, is by the *Great God* of *Nature*, committed to the Course of *Second Causes*; from whence issue forth several Streams, some more violent, others more gentle. Hence arises the beginning of *Action* and *Passion*. This Month promiseth very grateful Effects, from the Influence of the *Celestial Wanderers*, every thing seems to be disposed of in good Order, and where there is *Order* and *Regularity*, we need not fear the least *Confusion* or *Disfranchisement*. Truth is the Daughter of *Time*, and *Time* is the best *Critic*.

Men, by the Discourse of *Reason* and *Help* of *Art* and *Experience*, are able both to retain the *Memory* of that which is come to pass long since, and do farther make those things present unto them, which to the *ignorant* Sort seem yet to come: which kind of *Fore-knowledge* of things in their *Causes*, are proper to *Men* and other *Intellectual Natures*, and therefore to be exempted from the Title of *Divination*, *Conjuring*, &c. *Astrology* it self cannot but pass the Allowance of those that are impartial, having been all along approved by the Upright, and just, &c. entertained by the Wifest, and honour'd by the greatest Men in the World.

[illegible]

ADVERTISEMENT.

A Arts & Sciences Mathematical professed & taught by H. Coley at his House in Baldwin-Court over against the Old hole in the Wall in Baldwin-Garden, viz. Arithmetick, Geometry, Trigonometry, Navigation, Astronomy, the use of the Globes and other Mathematical Instruments, also Dyalling, Surveying, Gauging, Measuring, and the Art of Astrology in all its Parts.

Pidale Londinensis, or, The London Bills :

Made by a Physician of long Standing in the College of Physicians, London; and published for the good of the Publick. They are sold at his House in *Wichbush-street*, London; and in several places in and about London.

BUCKWORTH'S LOZENGES, Famous for the Cure of Coughs, Colds, Cancers, Hoarseness, &c. Being also a great Expellor and a Sovereign Spasmodic against all contagious Distempers, Malignant Air, and unwholesome weather; well approved of by the chief Physicians of the College, to whom the true Receipt hath been communicated by the Publisher hereof. They are now rightly prepared only by *James Shipton* Apothecary, at the *Crowns in Hatten-Garden*.

THE true Spirit of Scurvy-Grass (both Plain and Purg- ing) by the real first Author thereof, sold now for the general good for 6d a Glass in London, and 8d in the Country, equal if not beyond any publicly sold, as upon tryal will appear. Now those that will be deceived let them (for some have been counterfeiting at 6d a Glass). They are seal'd up with his Coat of Arms, being the three *Grass-Crosslets* and *Chiquar*, well known in London by the name of *Pedagis-Spirit* of Scurvy-Grass, and may be had at his House in *Leather-Lane* near *Holborn* by the *Chiquar-Inn* back Gate, with Printed Papers for its Virtue & Use.

ELIXIR magnum Vitæ; or, The Great Elixir of Life: being a most admirable Cordial-Drink, a most excellent Preservative of Humane Bodies, and of singular efficacy in several Diseases, as the Scurvey, Gout, Dropsie, and many other Maladies of this Age; the Particulars whereof, and its Use, are given in a Printed Book with the Bottles: which are Sold at *M^r Potter's* at the *Maiden-Head* in the *Strand*, almost right against *St. Clement's Church*; and at divers other places both in City and Country, in half Pint Bottles, sealed with his Coat of Arms. Price 2s 6d.

ALL sorts of Chymical Medicines faithfully Prepared and Sold by *Christopher Pack*, at the Sign of the *Globe* and Chymical Furnaces near the *Postern at Moor Gate*. Where you may have Catalogues gratis.

THE Famous Cordial-Drink, or Elixir Salutaris of the deceased Dr. Daffy, late of the Old-Bath, London, is still exactly made and sold by his Widow, in the Golden Ball, and two Blue Posts, in the Square in Salisbury-Court, near the middle of Fleet-Street, and by none else but such as sell it for her, sealed with the same Seal, the Stag's-Head, and a Book of its Use and Vertues at large. Beware of Counterfeits.

SIR JONAS MOORE'S Arithmetick in Four Books, Treating of Vulgar Arithmetick in all its parts, with several new Inventions to ease the Memory, &c. together with Arithmetick in Species, or Algebra, to which are added two Mathematical Tracts, one of Ellipsis, the other of Conic Sections analyzed, by the Famous William Oughtred: the third Edition, with Additions and Emendations, Sold by Obadiah Magrath at the Bear and Star in St. Paul's Church-Yard. Where you may have Englands Worthies, and most other Books of all Subjects at reasonable Rates.

COCKER'S Pens Transcendency, lately Reprinted in good Dutch Paper, Price 2s. 6d. also a Map of Scotland lately made by Robert Gordon, Author of Blains Atlas of Scotland, corrected and improv'd. Sold by Robert Walton, at the Globe on the North side of St. Paul's Church-Yard, near the West end: where you may have all sorts of Maps and Prints, &c.

Ruptures or Broken Bellics.

Present help for Men, Women or Children, by a Traveler famous in Germany and other Countries, for his practice these five and twenty Years; and maketh all sorts of Trusses easie, none such made in England, as these be found by experience. He helps those at a distance, as well with Directions, as those in London; and helps those which cannot hold their Water, or bearing down in their Privy-Pans, and maketh strait Stockings. The Poor have Advice for nothing. Take it in time. By R. Collins. From Nine to Twelve at the Bell and Naked Boy on the Ditch-side at Fleet-
Bridge. The Afternoon, at the Bell in St. Joannes Court in Clerkewill-Parish.
